

SHREDDER KIT

P/N 890209. *Shreds leaves, dramatically reducing total volume.*

HOSE KITS

For vacuuming in hard to reach areas.

Heavy Duty Vacuum

Hose Kit P/N 900943.

4" (102mm) x 10' (3.05m)

Homeowners Vacuum

Hose Kit P/N 900942.

4" (102mm) x 10' (3.05m)

NOZZLE WEAR PLATES

P/N 900810. *Extends nozzle life when used along curbs and hard surfaces.*

STANDARD FELT

DEBRIS BAG P/N

900803. *Standard on KD models. For dusty conditions.*

OPTIONAL DEBRIS BAGS

TURF DEBRIS BAG

P/N 900806 *For use in leaves and grass in non-dusty conditions.*

HEAVY DUTY DEBRIS BAG

P/N 900798 *Reinforced lower panel.*

DEBRIS BAG COVER

P/N 900801 *Directs dust downward, away from operator.*

BAG SUPPORT KIT

P/N 900645 *Extends bag life by keeping bag from dragging ground.*

ZIPPERLESS BAG

P/N 890221 *For non dusty conditions that are damaging to zippers.*

SLOW DOWN KIT

P/N 890216

Reduces ground speed for KDSP vacuums.

Now standard on KDSP.

CE95

Thank You for Selecting

The Powerful KD SELF-PROPELLED VACUUM

Operator Owner's Manual

KD502SPQ

Specifications

	KD502SPQ
ENGINE: H.P.	5 (3.73 kW)
ENGINE: TYPE	B&S QUANTUM
ENGINE: FUEL CAP.	1.5 qt. (1.4 L)
ENGINE: OIL CAP.	0.63 qt. (0.6 L)
WEIGHT: UNIT	117# (53.1 kg)
WEIGHT: SHIPPING	140# (63.5 kg)
ENGINE WEIGHT:	25.25# (11.45 kg)

5

IN THE INTEREST OF SAFETY

BEFORE STARTING ENGINE, READ AND UNDERSTAND THE "ENTIRE OPERATOR'S MANUAL & ENGINE MANUAL."

THIS SYMBOL MEANS WARNING OR CAUTION. DEATH, PERSONAL INJURY AND/OR PROPERTY DAMAGE MAY OCCUR UNLESS INSTRUCTIONS ARE FOLLOWED CAREFULLY.

WARNING: DO NOT

1. **DO NOT** run engine in an enclosed area. Exhaust gases contain carbon monoxide, an odorless and deadly poison.

2. **DO NOT** place hands or feet near moving or rotating parts.

3. **DO NOT** store, spill or use gasoline near an open flame, or devices such as a stove, furnace, or water heater which use a pilot light or devices which can create a spark.

4. **DO NOT** refuel indoors where area is not well ventilated. Outdoor refueling is recommended.

5. **DO NOT** fill fuel tank while engine is running. Allow engine to cool for 2 minutes before refueling. Store fuel in approved safety containers.

6. **DO NOT** remove fuel tank cap while engine is running.

7. **DO NOT** operate engine when smell of gasoline is present or other explosive conditions exist.

8. **DO NOT** operate engine if gasoline is spilled. Move machine away from the spill and avoid creating any ignition until the gasoline has evaporated.

9. **DO NOT** transport unit with fuel in tank.

10. **DO NOT** smoke when filling fuel tank.

11. **DO NOT** choke carburetor to stop engine. Whenever possible, gradually reduce engine speed before stopping.

12. **DO NOT** run engine at excessive speeds. This may result in injury & /or damage to unit.

13. **DO NOT** tamper with governor springs, governor links or other parts which may change the governed engine speed.

14. **DO NOT** tamper with the engine speed selected by the engine manufacturer.

15. **DO NOT** check for spark with spark plug or spark plug wire removed. Use an approved tester.

16. **DO NOT** crank engine with spark plug removed. If engine is flooded, place throttle in "FAST" position and crank until engine starts.

17. **DO NOT** strike flywheel with a hard object or metal tool as this may cause flywheel to shatter in operation. Use proper tools to service engine.

18. **DO NOT** operate engine without a muffler. Inspect periodically and replace, if necessary. If engine is equipped with muffler deflector, inspect periodically and replace, if necessary, with correct deflector.

19. **DO NOT** operate engine with an accumulation of grass, leaves, dirt or other combustible material in the muffler area.

20. **DO NOT** use this engine on any forest covered, brush covered, or grass covered unimproved land unless a spark arrester is installed on the muffler. The arrester must be maintained in effective working order by the operator. In the State of California the above is required by law (Section 4442 of the California Public Resources Code). Other states may have similar laws. Federal laws apply on federal lands.

21. **DO NOT** touch hot muffler, cylinder, or fins because contact may cause burns.

22. **DO NOT** run engine without air cleaner or air cleaner cover.

23. **DO NOT** operate during excessive vibration!

24. **DO NOT** leave machine unattended while in operation.

25. **DO NOT** park machine on a steep grade or slope.

WARNING: DO

1. **ALWAYS DO** remove the wire from the spark plug when servicing the engine or equipment TO PREVENT ACCIDENTAL STARTING.

2. **DO** keep cylinder fins and governor parts free of grass and other debris which can affect engine speed.

3. **DO** pull starter cord slowly until resistance is felt. Then pull cord rapidly to avoid kickback and prevent hand or arm injury.

4. **DO** examine muffler periodically to be sure it is functioning effectively. A worn or leaking muffler should be repaired or replaced as necessary.

5. **DO** use fresh gasoline. Stale fuel can gum carburetor and cause leakage.

6. **DO** check fuel lines and fittings frequently for cracks or leaks. Replace if necessary.

7. **Follow** engine manufacturer operating and maintenance instructions.

8. **Inspect** machine and work area before starting unit.

SOUND TESTS

Sound tests conducted were in accordance with 79/113/EEC and were performed on 05/20/94 under the conditions listed:

GENERAL CONDI- Sunny
TION:

3 L_{pA}
109

TEMPERATURE: 70 °F (21.1 °C)

WIND SPEED: 3 MPH (4.8 kmh)

WIND DIRECTION: N. W.

HUMIDITY: 58 %

OPERATOR BAROMETRIC PRESSURE: 30.1" Hg (765mm Hg)

Page 2 of 12

8

VIBRATION

VIBRATION LEVEL 2.7g
Vibration levels at the operators handles were measured in the vertical, lateral, and longitudinal directions using calibrated vibration test equipment. Tests were performed on 05/20/94 under the conditions listed:
GENERAL CONDI- Sunny
TION:

TEMPERATURE: 70 °F (21.1 °C)

WIND SPEED: 3 MPH (4.8 kmh)

WIND DIRECTION: N. W.

HUMIDITY: 58 %

BAROMETRIC PRESSURE: 30.1" Hg (765mm Hg)

Form No. F021695H

9 GENERAL SAFETY

For your safety and the safety of others, these directions should be followed:

 Do not operate this machine without first reading owner's manual and engine manufacturer's manual.

 Use of Ear Protection is recommended while operating this machine.

 Use of Eye and Breathing protection is recommended when using this machine, especially in dry and dusty conditions. Optional bag cover directs dust toward ground, away from the operator.

- DO NOT place hands or feet inside nozzle intake opening, near debris outlet or near any moving parts.
- DO NOT start engine without debris bag and quick disconnect connected firmly in place to exhaust outlet.
- DO NOT start or operate machine with debris bag zipper open.

- DO NOT operate during excessive vibration.
- DO NOT remove bag until engine has been turned off and has come to a complete stop.
- DO NOT remove hose kit cap on nozzle until engine has been turned off and has come to a complete stop.
- DO NOT operate machine with hose cap, bag or hose removed.
- DO NOT use this machine for vacuuming **exclusively** sand, dust, fine dirt, rock, glass, string like material, grain, rags, cans, metal, bark or water.
- DO NOT operate this machine on slopes greater than 20%.
- DO NOT pick up any hot or burning debris, or any toxic or explosive material.
- DO NOT allow children to operate this equipment.

GENERAL SAFETY & ASSEMBLY 3

10 ASSEMBLY

 Read all safety and operating instructions before assembling or starting this unit.

 PUT OIL IN ENGINE BEFORE STARTING.

Your Billy Goat is shipped from the factory in one carton, completely assembled except for the debris bag, upper handle, height adjustment rod and bag quick disconnect.

1. **ASSEMBLE** upper handle securely to lower handle stubs using handle screws (item 8), washers (item 25) and nut lock 5/16-18 (item 26), with screw heads facing inward toward debris bag. Otherwise, premature bag wear could result.
2. **ASSEMBLE** height adjustment rod (item 23), thru eye bolt (item 15), on upper handle and thru upper flange of height adjustment bracket (item 18), thru spring (item 20), and thru lower flange of height adjustment bracket (item 18). Insert pin (item 22), between spring and lower flange of height adjustment bracket (see VIEW A on page 10). Slide grip (item 46), onto upper end of height adjustment rod (item 23).
3. **UNFOLD** the debris bag (item 1) and fasten bag neck to bag quick disconnect (item 12). Attach firmly to housing exhaust (item 52) see fig. 2.
4. **ATTACH** bag hanger straps to loops (item 11), preassembled to upper handle.
5. **ATTACH** throttle assy. (item 2), to handle using cable clamps (item 9).
6. **CONNECT** spark plug wire.

11 PACKING CHECKLIST

These items should be included in your carton. If any of these parts are missing, contact your dealer.

Attach upper handle using screws, washers and lock nuts provided in parts bag.

Debris Bag Label item 1

Briggs & Stratton

INTENDED USE: This machine is designed for vacuuming leaves, grass clippings and other types of organic litter. Debris mixed with cans, bottles and small amounts of sand can be vacuumed; however, it is not this machine's primary purpose. Vacuuming cans, bottles and sand will affect the longevity of your machine.

Do not operate if excessive vibration occurs. If excessive vibration occurs, shut engine off immediately and check for damaged or worn impeller, loose impeller bolt, loose impeller key, loose engine or lodged foreign objects. Note: See parts list for proper impeller bolt torque specifications. (See trouble shooting section on page 12).

Like all mechanical tools, reasonable care must be used when operating machine.

Inspect machine work area and machine before operating. Make sure that all operators of this equipment are trained in general machine use and safety.

PUT OIL IN ENGINE BEFORE STARTING.

16.1 STARTING

ENGINE: See engine manufacturer's instructions for type and amount of oil and gasoline used. Engine must be level when checking and filling oil and gasoline.

ENGINE SPEED: Controlled by throttle lever on the handle. Under normal conditions, operate at minimum throttle to accomplish your current cleaning task.

FUEL VALVE: Move fuel valve to "ON" position (when provided on engine).

CHOKE: See Primer.

PRIMER: Push primer per engine instructions.

THROTTLE: Move remote throttle control to fast position. Pull starting rope to start engine.

IF YOUR UNIT FAILS TO START:

See Troubleshooting on page 12.

16.2 VACUUMING OPERATION

VACUUM NOZZLE HEIGHT ADJUSTMENT: is raised and lowered by lifting slightly upward on handle and up on height adjustment rod located at left side of handle. The nozzle height can be adjusted during operation without stopping.

FOR MAXIMUM PICKUP: Adjust nozzle close to debris, but without blocking airflow into the nozzle. *NOTE:* Never bury nozzle into debris.

CLEARING A CLOGGED NOZZLE

& EXHAUST: Turn engine off and wait for impeller to stop completely and disconnect spark plug wire.

Wearing durable gloves, remove clog. **Danger**, the clog may contain sharp materials. Reconnect spark plug wire.

Debris bags are normal replaceable wear items.

 **Note:** Frequently empty debris to prevent bag overloading with more weight than you can lift.

An optional bag and dust cover is available for use where debris will be vacuumed in dusty conditions (see **Optional Accessories shown on page 1.**)

DO NOT place bag on or near hot surface, such as engine. Run engine at 1/2 throttle for first 1/2 hour to condition new bag. Your new bag requires a break-in period to condition the pores of the material against premature blockage. The entire bag surface serves as a filter, and must be able to breathe to have good vacuum performance. Be sure engine has come to a complete stop before removing or emptying bag.

This vacuum is designed for picking up trash, organic material and other similar debris (see Safety Warnings page 2-3). However, many vacuums are used where dust is mixed with trash. Your unit can intermittently vacuum in dusty areas. Dust is the greatest cause of lost vacuum performance. However, following these rules will help maintain your machine's ability to vacuum in dusty conditions:

- Run machine at idle to quarter throttle.
- The debris bag must be cleaned more frequently. A vacuum with a clean, pillow soft bag will have good pickup performance. One with a dirty, tight bag will have poor pickup performance. If dirty, empty debris and vigorously shake bag free of dust.
- Machine or pressure-wash debris bag if normal cleaning does not fully clean bag. Bag should be thoroughly dry before use.

Having one or more spare debris bags is a good way to reduce down time while dirty bags are being cleaned.

- DO NOT** leave debris in bag while in storage.

16.6

PROPULSION

This vacuum is self-propelled. To engage the drive, lift operator's bail against operator's handle. The drive is disengaged by releasing the operator's bail.

GROUND SPEED can be varied by applying slight downward pressure to handle during operation (to allow drive wheels partial slippage) or by changing the engine rpm.

For improved control in confined areas, this machine can be freewheel pushed forward or backward by releasing the operator's bail and pushing machine.

16.4

HANDLING & TRANSPORTING:

Using two people to lift machine is recommended. Lift holding the handle and front of nozzle. Secure in place during transport.

16.5

STORAGE

⚠ Never store engine indoors or in enclosed poorly ventilated areas with fuel in tank, where fuel fumes may reach an open flame, spark or pilot light, as on a furnace, water heater, clothes dryer or other gas appliance.

If engine is to be unused for 30 days or more, prepare as follows:

⚠ Be sure engine is cool. Do not smoke. Remove all gasoline from carburetor and fuel tank to prevent gum deposits from forming on these parts and causing possible malfunction of engine. Drain fuel outdoors, into an approved container, away from open flame. Run engine until fuel tank is empty and engine runs out of gasoline.

NOTE: Fuel stabilizer (such as Sta-Bil) is an acceptable alternative in minimizing the formation of fuel gum deposits during storage. Add stabilizer to gasoline in fuel tank or storage container. Always follow mix ratio found on stabilizer container. Run engine at least 10 min. after adding stabilizer to allow it to reach the carburetor.

⚠ Do not store with debris in bag.

Use only a qualified mechanic for any adjustments, disassembly or any kind of repair .

WARNING: TO AVOID PERSONAL INJURY, ALWAYS TURN MACHINE OFF, MAKE SURE ALL MOVING PARTS COME TO A COMPLETE STOP.

DISCONNECT SPARK PLUG WIRE BEFORE SERVICING UNIT.

ENGINE: See engine manufacturer operator's instructions.

DEBRIS BAG: See page 6.

RECONNECT SPARK PLUG WIRE, GUARDS, BAG, CAPS AND / OR HOSE BEFORE STARTING ENGINE.

IMPELLER REMOVAL

1. Wait for engine to cool and disconnect spark plug.
2. Drain fuel and oil from the engine.
3. Remove bag, quick release, upper handle and clutch cable from upper handle. Do not kink, stretch, or break control cables, control housings, or end fittings while removing handles.
4. Remove chain guard, chains and jackshaft assembly (see page 9, Drive Chain).
5. Invert and support machine with engine not touching ground to prevent damage to recoil starter.
6. Disassemble housing by removing six (6) lock nuts and washers from nozzle frame, (2 are inside of nozzle opening).
7. Remove impeller bolt and lock washer.
8. Lift impeller upward. If impeller slides freely, proceed to (step 11).
9. Place two crowbars between impeller and housing on opposite sides. Pry impeller away from engine until it loosens. *Using a penetrating oil can help loosen a stuck impeller.*
10. If the impeller does not loosen, obtain a 1" (25.4mm) longer bolt of the same diameter and thread type as the impeller bolt. Thread longer bolt by hand into the crankshaft until bolt bottoms. Using a suitable gear or wheel puller against the bolt head and the impeller back-plate (near the blades), remove impeller from shaft.
11. Remove engine mounting screws, bolts, and nuts as required.
12. When impeller is free of the engine shaft, lift impeller and housing assembly off engine. Align impeller with opening, and diagonally lift impeller out of housing.
13. Using a new impeller bolt and lockwasher, reinstall new impeller in reverse order.
14. Tighten impeller bolt. Torque impeller bolt to 50 Ft. Lbs. (68 N.m) (see item 51 on page 11).
15. Reinstall engine onto housing in reverse order of removal.
16. Invert machine back onto all 4 wheels.
17. Reinstall jackshaft assembly components onto housing in reverse order of removal, properly tighten chains and adjust clutch (see Drive on page 9).
18. Reinstall spark plug wire.

17.2

Maintenance Schedule

Follow these hourly maintenance intervals.

Maintenance Operation	Every Use	Every 5 hrs or (Daily)	Every 10 hrs	Every 25 hrs
Engine (See Engine Manual)				
Check for excessive vibration		●		
Clean Debris Bag	●			
Check bag strap tightness	●			
Inspect for loose parts		●		
Inspect for worn or damaged parts		●		
Lubricate Chains and Clutch			●	
Inspect Chains and Clutch				●

MAINTENANCE HISTORY	
Date of Service	Service Performed

17.3

DRIVE

Chains are normal replaceable wear items. A new chain should not be used on worn sprockets. Sprockets should be replaced when replacing chains.

⚠ Stop engine and disconnect spark plug wire before making adjustments.

CHAIN ADJUSTMENTS

1. Remove chainguard (item 118) and 3 screws (item 81 & 71).
2. Inspect chains (items 87 & 88), for wear, (see chain replacement), lubrication and correct adjustment.
3. If adjustments are required, loosen 4 carriage bolts (item 90), that hold bearing brackets for jackshaft assembly.
4. Adjusting all (3) chains at same time is necessary and can be done by pulling jackshaft (item 93), up and forward.
5. Tension chains - similar to bicycle chain tightness with about 1/8" (3.2mm) deflection with light hand pressure mid-way between sprockets. A slightly loose chain is better than an over tightened chain. DO NOT over tighten.
6. With chains aligned and tensioned, and jackshaft (item 93), square and level, tighten carriage bolts (item 90).
7. Completely rotate drive wheels around several times to insure there are no excessively tight areas in the chain.
8. Repeat steps 4 thru 7 if chains need readjustment.
9. Reinstall chainguard (item 118).

CHAIN REPLACEMENT

1. With chain guard removed, loosen carriage bolts (item 90), that hold jackshaft (item 93), and bearing plates (item 101).
2. To replace inner chain (item 88), remove jackshaft assembly and install replacement chain.
3. To replace wheel chains (item 87), slide bearing plates (item 101), toward engine to loosen chains. Remove front wheels. Reinstall replacement chains with wheels and onto jackshaft sprockets.
4. See steps 4 thru 7 for chain alignment and adjustment.
5. Reinstall chainguard (item 118).

CLUTCH ADJUSTMENT

The clutch control cable is pre-adjusted at the factory, so when the bail is released, rod (item 115), engages clutch assembly (item 121), to stop forward drive motion and allow forward and backward free-wheeling. When the bail is held against handle, the clutch rod moves away from clutch assembly to allow drive engagement.

If drive will not disengage, adjust and align control bracket so that rod (item 115) fully contacts triangular plate on clutch assembly when bail is released (see fig. 8). See lubrication intervals on Maintenance Schedule.

TROUBLESHOOTING

Before Requesting Service Review These Suggestions

Problem	Possible Cause	Solution
Will not vacuum or has poor vacuum performance.	Dirty debris bag. Nozzle height set too high or too low. Hose kit cap missing. Clogged nozzle or exhaust. Excessive quantity of debris.	Clean debris bag. Shake bag clean or wash. Adjust nozzle height. Check for hose kit cap. Unclog nozzle or exhaust (see page 5). Allow air to feed with debris.
Abnormal vibration.	Loose or out of balance impeller or loose engine.	Check impeller and replace if required. Check Engine.
Engine will not start.	Throttle in off position. Out of gasoline. Bad or old gasoline. Spark Plug wire disconnected. Dirty air cleaner.	Check stop switches, throttle, and gasoline. Connect spark plug wire. Clean or replace air cleaner. Or contact a qualified service person.
No self propelling.	Operator's bail not releasing clutch. Broken or out of adjustment clutch cable. Worn or broken clutch assembly. Bracket control assembly (item 112) out of adjustment.	Adjust clutch cable. Adjust bracket control assembly. Replace any worn or damaged or malfunctioning parts.
Self propelled drive will not release.	Clutch cable out of adjustment. Clutch not lubricated and is locked-up.	Adjust clutch cable. See page 9 Clutch Adjustment. Oil clutch.
Engine is locked, will not pull over.	Debris locked inside impeller. Engine problem.	See page 5, Contact an engine servicing dealer for engine problems.

WARRANTY PROCEDURE

Please fill in the WARRANTY CARD and send the upper part to Billy Goat. The WARRANTY terms are stated on the lower part which remains with the user. Whenever a Billy Goat Machine is faulty due to a defect in material and / or workmanship, the owner should make a warranty claim as follows:

The Machine should be taken to the dealer from whom it was purchased or to an authorized Billy Goat dealer.

The owner should present the remaining half of the Warranty Registration Card, or, if this is not available, the invoice or receipt.

The Warranty Claim will be filled in by the authorized Billy Goat Dealer, who will send it with the faulty part to Billy Goat headquarters.

The Quality / Service department at Billy Goat headquarters will study the claim and parts and will notify their conclusions.

The decision by the Quality / Service department at Billy Goat headquarters to approve or reject a Warranty claim is final and binding.

Note: To process a Warranty Claim, it is necessary to quote the Model & Serial number who are printed on the Billy Goat Serial Plate.
